SUMMARY

Full-stack developer with a strong frontend foundation, building production web and mobile applications end-to-end. Over a year at a software consultancy I expanded from frontend into backend and AI/LLM, working in small teams on live client products, and landed a merged bugfix in **fast-json-stringify** (Fastify ecosystem). Computer Engineering student at Politecnico di Torino.

EXPERIENCE

Full Stack Developer, Efebia S.r.l. (Remote) Aug 2025 - Aug 2026

- Built and shipped a client web platform **end-to-end**: frontend (SvelteKit), backend REST APIs (Node.js / Fastify with Zod validation), and data layer (PostgreSQL, Drizzle ORM).
- Worked on the platform's **AI layer**: a retrieval-augmented generation (RAG) pipeline over Google Gemini (LangChain), with document embeddings in PostgreSQL / pgvector, custom function-calling tools, and streamed responses over SSE.
- Took over a **live product inherited in a critical state** and stabilized it into a working production application, debugging and refactoring a legacy codebase under real-world constraints.
- Delivered work across **multiple client products** from initial build to post-ship polish, including real-time features (WebSockets) and responsive UIs in Svelte, React, and React Native.

OPEN SOURCE

fast-json-stringify (Fastify ecosystem) github.com/fastify/fast-json-stringify
Merged bugfix (PR #841) resolving a JSON serialization edge case; reviewed and merged by the project maintainer.

SKILLS

Languages	TypeScript / JavaScript, Python, Java, SQL
Frontend	Svelte / SvelteKit, React, React Native, Tailwind CSS
Backend	Node.js, Fastify, REST APIs, WebSockets / SSE, Zod
Databases	PostgreSQL (+ pgvector), MongoDB, Drizzle ORM
AI / LLM	Google Gemini, LangChain, RAG, embeddings, function calling
Tools	Git, Docker

EDUCATION

B.Sc. in Computer Engineering, Politecnico di Torino In progress

LANGUAGES

Italian (native) · English (B2)
